This course is designed for experienced crash reconstructionist who have a good working knowledge of the techniques and applications of formulas taught in reconstruction courses and wish to build upon that foundation with more advanced mathematical formulas used to analyze pedestrian and bicycle crashes. By analyzing reaction times, victim injury analysis and environmental factors, the student will learn to recognize and interpret evidence and associate it with the crash sequence. In addition to classroom instruction, practical exercises and staged scenarios will be used to give the student hands-on experience.

### Upon completion of this course, the student should be able to:

1. Demonstrate the use of pedestrian crash formulas.
2. Describe impact dynamics from pedestrian/bicycle crashes.
3. Describe an objective, subjective, and performance data analysis.
4. Explain the proper collection of evidence from a crash.
5. Explain pedestrian/bicycle conspicuity.
6. Explain reaction time and human factors in collision analysis.
7. Explain and describe reconstruction techniques and bicycle collision analysis.
8. Explain how to properly conduct a hit and run investigation.

This course is designed to meet requirements as mandated by the Maryland Police Training Commission and to meet the annual in-service requirements.
